

**Wireless smoke alarm device  
fumonic 3 radio net**

Information for tenants and proprietors

**ista**

# Congratulations!

Intelligent fumonic 3 radio net smoke alarm devices have been installed in your apartment. The landlord herewith complies with the mandatory equipment obligation and actively contributes to your safety.

## Your benefits

- **Reliable protection**

The smoke alarm device warns you in case of smoke development. That is especially vital at night, because the sense of smell is inactive during sleep.

- **Easy maintenance**

Since the fumonic 3 radio net comes equipped with a wireless module, monthly maintenance is performed conveniently by radio and you won't even notice. For you that means: no more bothersome appointments and the comforting assurance that everything works.

- **Tested safety**

Naturally, all units are VdS-certified, have been awarded the Q-label and work with a permanently integrated 10-year battery.

*Important information –  
please keep in a safe place!*

# This is the fumonic 3 radio net wireless smoke alarm device

## White light emitting diode

- improves orientation in the apartment in case of emergency

## Red indicator light

- indicates the functional reliability of the smoke alarm device
- is located on the side of the unit, so it is not a bothersome light source

## Built-in seal

- is destroyed if unit is dismantled
- must be replaced subject to charge
- Discuss dismantling with your landlord

## Integrated function buttons

- are used to check the alarm with a test alarm (3x loud tones). You should do the test monthly in addition to the remote maintenance
- enables ending the alarm in case of a false alarm ("Acknowledge alarm")
- is used for the 10-minute "Alarm mute" prior to expected smoke development

Do you have any questions?  
We would be glad to answer  
them: +49 201 50744497

# These are what the signals on your smoke alarm device mean

	Signal			Meaning
	Tone	LED lamp (red)	LED lamp (white)	
	Steady alarm sequences	Flashes 3-times per alarm sequence	Illuminated	Alarm
	Mute	Flashes once every 48 seconds	Off	Smoke alarm device is working
	Single alarm sequence	Flashes	Off	Test alarm
	One acoustic signal every 45 seconds	Flashes once every 8 seconds	Off	The battery needs to be replaced soon (fully functional for another 30 days)
	One acoustic signal every 45 seconds	Flashes quickly	Flashes quickly	Malfunction in unit (The functional performance of the smoke alarm device is not guaranteed!)
	Mute, since deactivated for 10 minutes	Flashes twice every 10 seconds	Off	Alarm was confirmed as a false alarm ("Acknowledge alarm")
	Mute, since deactivated for 10 minutes	Flashes twice every 10 seconds	Off	Alarm was muted for 10 minutes prior to smoke development

**Audio signal:** 1-x short tone at reduced volume

**Alarm sequence:** 3-x short tones at full volume

Promptly advise your property manager

Promptly advise your property manager

When muted, watch out for fires!

When muted, watch out for fires!

### Remote maintenance

A smoke alarm device must work flawlessly at all times. For that reason, we check all the functions on your unit monthly via radio. The test covers:

- Check of the battery capacity
- The smoke inlet openings are clogged
- The smokebox is dirty
- As-installed condition
- Muted alarm check

If you notice a malfunction (recognizable by the smoke alarm's signals), please immediately notify the property management. Do not wait until the next remote maintenance; the unit needs to be promptly put into functioning condition. This is for your own safety!

# Your questions, our answers

## **What should I do with the smoke alarm device during renovations or alterations?**

Since re-painting, wallpapering and long-term covering lead to a malfunction of the fumonic 3 radio net, the landlord or management must always be notified before you start the renovations. The same applies if you want to use rooms without smoke alarm devices as bedrooms in the future. Please take the following into consideration during all work: No objects (e.g., lamps, cabinets, room partitions) are allowed to be located within 50 cm of the smoke alarm device. If you want to attach objects in the direct vicinity of 50 cm around the smoke alarm device during alteration/renovation work, standard-compliant reinstallation of the smoke alarm device by an ista service employee, which is subject to charge, is necessary beforehand.

## **Can I dismantle the smoke alarm device myself?**

No! The fumonic 3 radio net is professionally attached in accordance with the relevant DIN standard 4676 and is protected with a seal. That indicates the intactness of the unit. The seal will be destroyed during impermissible dismantling. Fee-based resealing by an ista service employee is then necessary.

## **What should I do if there is a false alarm?**

First make absolutely sure that it really is a false alarm; it can be triggered by strong cooking fumes, for example. When that is clarified, press lightly against the function button to deactivate the alarm for 10 minutes (“Acknowledge alarm”).

## **Can I temporarily deactivate the smoke alarm device, for instance while cooking?**

Yes. If, for instance, you want to prevent the alarm from triggering due to smoke development, you can switch the smoke alarm device to mute for 10 minutes.

To do that, slightly press the function button. After the 10 minutes have expired, your smoke alarm device automatically reactivates.

### **How can I do an alarm test myself?**

Independent of the automatic radio remote maintenance, you should perform an alarm test yourself on the fumonic 3 radio net monthly. Keep the function button pressed until the white LED is illuminated and the alarm signal sounds three times. Due to the high volume, stay at least 50 cm away from the smoke alarm device. If no alarm signal sounds latest 10 seconds after you kept the button pressed, repeat the alarm test. If there is no alarm signal this time again, the alarm is defective and has to be replaced. Please inform your landlord about this.

## **More information**

We would be glad to help you with any questions about smoke alarm devices 24 hours a day through the hotline: **+49 201 50744497**

Your property no.\*: \_\_\_\_ - \_\_\_\_ - \_\_\_\_ / \_\_\_\_

\* Please have your property number available when you call our hotline.  
You will be informed about the number by the ista service employee during the installation of the smoke alarm device.

# Quality smoke alarm device fumonic 3 radio net

G211038

## Performance characteristics of the fumonic 3 radio net

- CE marking as per DIN EN 14604
- Q-label as per VdS 3131 and vfdb Directive 14-01
- Battery life 10 years
- White light emitting diode for orientation in case of alarm
- Muting function
- Extraction system to reduce false alarms
- Mechanical seal to identify manipulations

## Test equipment for the fumonic 3 radio net for monthly remote testing:

- Clog detection to check the smoke inlet openings
- Dirt detection and compensation of the smokebox
- Dismantling detection to check the as-installed condition
- Battery management to check the battery capacity
- Alarm-alerter mute check

# What should you do when there is a fire?

Emergency phone number 112

In a fire, every second counts. So immediately go to a safe place together with your fellow occupants and then immediately call the emergency phone number!

## The fire brigade needs to know this information

To help you as quickly as possible in an emergency, please provide the main control centre with the following necessary information:

### Who is calling?

Name, address, telephone no. for questions

### Where is the fire?

City, street and house number

### What is burning?

Apartment, office building, vehicle

### What is the situation?

Are people endangered? Number of injured

### Is any additional information necessary?

Wait for possible questions from the control centre staff

# Fire in the apartment

In a fire, every second counts. It is good that your smoke alarm device alerted you to the dangerous situation in time so that you have a chance to exit your apartment in good time.

Take refuge in the stairwell

Warn the other occupants

Leave the building

Call the emergency phone number

# Fire in the stairwell

If the escape route is blocked by flames, stay calm and do not walk in the stairwell.

Blocked escape route

Close door

Seal the air slot under the door with a blanket or similar

Wait at the window for the fire brigade

Make your way to a place that has a safe distance

i

## Additional information

You will receive additional instructions on behaviour during a fire from your local fire brigade if necessary.

GZ11038

The fumonic 3 radio net smoke alarm device is approved as per DIN EN 14604 and is VdS certified. The smoke alarm device also meets the increased quality criteria of the vfdb Directive 14-01 and was therefore awarded the Q quality label.
